MUST CHOOSE EXISTING PIPE TYPE

Lead 
A dull, silver-gray color that is easily scratched with a coin. Use a magnet - strong magnets will not cling to lead pipes.

Galvanized 
A dull, silver-gray color. Use a magnet - strong magnets will typically cling to galvanized pipes.

Copper 
The color of a copper penny.

Plastic 
White, rigid pipe that is joined to water supply piping with a clamp. Other colors might include: BLUE, BLACK, or GREEN

Types of water pipes
Follow the guidance below or contact a licensed plumber to determine the material of your water pipes. To identify the material of your service pipe material on private property, check your household water service connection, typically located in the basement.

Homeowners should identify and replace old household pipes, particularly galvanized plumbing and sources of lead. The type of household plumbing can vary throughout your household.

If the current water meter is located inside the home/structure, the District may request the water meter be brought up to our current standards and relocated outside.

Mountain Regional Water District requires all new as well as remodeled residential and commercial connections to the district's current water infrastructure to follow uniform drawings, specifications, and standards. <https://www.mtregional.org/drawings-and-specifications>
