Re: Technology Department Update

OVERVIEW OF PAST MONTH:

- **Infrastructure & Security:** The lock project has been completed with only a few sites that require some additional work to secure hatches. Operations will help with the welding and concrete drilling that is needed to complete these last few sites.
- **GIS & Asset Management:** Kadin and Jess continue to make progress with Customer Service and Transmission groups and implementing more Open Gov processes and work flows.
- **Annexations:** We have been working on drafting the Altus Station Annexation plat and supporting documents for this ACB meeting.
- **SCADA:** Our Stonehouse vault, near the base of Glenwild, finally has a building permit for our new electrical connection. This site used to get its power from the nearby residence. This spring our circuit finally died and it has taken all summer to get the required documents from Rocky Mountain Power and the Building Department. A new electric meter base and service connection will allow us to have a small sump pump and heater in this vault to help keep our equipment in better shape.
- **Statistics:**
